Lima, Perú | omargpax.dev@gmail.com | [linkedin.com/in/omargpax](https://www.linkedin.com/in/omargpax) | omargpax.dev

Backend Developer | Java & Python | Data Analyst

Experience

Programmer Analyst | ADRA PERÚ June 2025 – Present
Lima, Perú (Hybrid)

- Developing and maintaining software solutions to support organizational operations utilizing modern programming practices.
- Designing interactive data visualization dashboards using Microsoft Power BI to facilitate strategic decision-making and data analysis.
- Collaborating in a hybrid team environment to optimize data workflows and reporting systems.

Java Developer & Data Analyst Intern | A&P S.A.C. 2022 – 2023
Perú

- Engineered backend services and microservices utilizing the Spring Boot framework and Java.
- Leveraged Power BI to analyze logistics data, optimizing delivery routes to significantly improve operational efficiency.

Software Developer | IATec March 2022 – December 2022
São Paulo, Brazil (Remote)

- Actively contributed to the migration of legacy WebApps from ASP.NET to .NET Core 6, playing a key role in decoupling backend and frontend architectures.
- Developed and optimized robust RESTful APIs using .NET Core, implementing error mitigation strategies to ensure high availability.
- Engineered responsive frontend interfaces using Angular, ensuring a seamless user experience across devices.
- Implemented Test Driven Development (TDD) methodologies to validate features and minimize production bugs.
- Utilized Azure DevOps for project delivery and task tracking within a Scrum/Kanban agile environment.

Education

Universidad Peruana Unión March 2020 – December 2024
Bachelor's degree, Systems Engineering Lima, Perú

Projects

D-MO (Data Micro-Optimizer) | *Next.js, TypeScript, Tailwind CSS, SheetJS, PapaParse*

- Architected and developed a client-side ETL web application using Next.js 14 and TypeScript to parse, validate, and transform complex financial and banking datasets (.csv, .xlsx, .xlsb) with complete privacy and zero server overhead.
- Engineered a modular ETL engine implementing flexible alias mapping algorithms to seamlessly handle dynamic headers and multi-format layouts.
- Integrated a real-time tracking dashboard featuring a custom live audit log console and telemetry metrics bar to monitor processing pipelines.

Bootstrap Sandbox Architecture | *Java, Spring Boot, OpenAI API*

- Developed an intelligent backend architecture generator that creates custom Java/Spring Boot boilerplate code based on specific client requirements.
- Integrated OpenAI GPT-4 to analyze architecture needs based on three key metrics: performance, complexity, and reliability.

Skills

Backend & Core:	Java, Python, Spring Boot, .NET Core, ASP.NET.
Data & Analytics:	SQL, Microsoft Power BI, SQL Server, ETL Data Processing.
Frontend & Web:	JavaScript (ES6+), TypeScript, Next.js, Tailwind CSS.
Tools & DevOps:	Git, Docker, Azure DevOps, AWS, Postman, Trello.
